Element Client

Anmelden und Personen finden

User name: LDAP ID (= Stud.IP user ID, only the login abbreviation, no e-mail address)

Password: LDAP password (= Stud.IP password)

You can find other users under @Ihre_LDAP-Kennung:uni-osnabrueck.de

It is essential (!) that you generate a key backup, otherwise you will no longer be able to access any encrypted calls that have already taken place. Save this security key securely and for yourself retrievable (!) as you will use this key to verify yourself later.

Click on **“Fortfahren”**. The next time you log in, you will be asked to verify your device.

Then click on **“Mit Sicherheitsschlüssel verifizieren”**.

Finding people

You can only find users by their **name** or LDAP user ID:uni-osnabrueck.de (matrix ID), but **not** by their university email address. If you search for email addresses, you can create a room, but it will remain empty because Element cannot search for email addresses, only for Matrix IDs. The other person must have logged in to Element beforehand so that there is an account (see Log in and save key).

The account found should NOT be @LDAP user ID:chat.virtuos.uni-osnabrueck.de! These are old user accounts on the test server, which will be switched off in the medium term.
